

The reduced train timetables in operation due to the Corona Virus means that hundreds of railway vehicles are parked up at depots around the country.

The need to get passenger carriages and driver facilities clean and hygienic has never been greater. TBM is available to support operators with a full range of tank emptying, acid flushing, sanitising and overhaul services.

Now is the perfect opportunity to deep clean CET tanks. Standing idle, tank contents can block pipes and gases can build up (including Methane & Hydrogen Sulphide). With a 300-gallon bowser, we can also empty tanks before cleaning – at any depot in the UK.

We offer a quick turnaround so that vehicles are available and ready for service as and when running schedules are ramped up again.

- Complete CET service
- Rail industry approved solutions
- 300-gallon bowser
- Keep customers safe
- Avoid unpleasant smells & toxic gases
- Quick turnaround
- Increase toilet availability
- Any UK rail depot
